

GRE Vocabulary Trainer

Fully Guided User Manual

Installation, Dataset Editing, Mnemonics, Notes, Study Plans, and Recommended GRE Workflow

Main recommendation Start with **Grouped_Core_GRE_Words** as the first priority. Use it group by group, then use **High_Frequency_333** and **Top_100_GRE_Words** for reinforcement, **Vocabulary_Builder_1400** for expansion, and **Classic_GRE_Word_List** for broad revision.

1. Installation and First Run

This section should be read before using the software. The trainer is designed to work offline on Windows. Keep all software files in one folder and do not rename files unless the launcher and Python code are updated accordingly.

Item	Purpose
First-time setup batch file	Run once on a new computer. It creates the virtual environment and installs required packages.
Open/launcher batch file	Use this every time after setup to open the trainer.
Python trainer file	The actual software code that runs the app.
GRE vocabulary database	The master word database with datasets/resources and word details.
GRE user data workbook	Stores your progress, notes, personal mnemonics, flags, plans, and logs.

First-time installation steps

- 1 Copy the full trainer folder to the computer.
- 2 Open the folder and double-click the first-time setup batch file.
- 3 Wait until setup completes. It may take a few minutes the first time.
- 4 After setup, double-click the open/launcher batch file to open the app.
- 5 If Windows asks for permission, allow the script to run because it is preparing the local Python environment.

Important Run the first-time setup only once per computer. After that, open the app with the launcher. If the app fails after moving the folder, run the setup file again.

Common installation problems

Problem	What to do
Python not found	Install Python 3.11 or newer and select Add Python to PATH during installation. Then run the setup file again.
Package installation failed	Check internet connection and run the setup file again.
App opens then closes	Open through the batch file so the error stays visible. Check that the database and user data workbooks are in the same folder.
Progress not saving	Close Excel if the user data workbook is open. Excel can lock the file and prevent saving.

2. Before Studying: Check and Edit the Dataset When Needed

The vocabulary database is strong, but no generated or combined vocabulary dataset is perfect. There can be occasional errors in meaning, synonym, antonym, example, root, tone, or frequency. If you find an error, edit the database workbook directly and then reopen the trainer.

Dataset correction policy

If a meaning, synonym, example, root, or other field looks wrong, correct it in the vocabulary database. Save the workbook, close Excel, and reopen the trainer. The trainer reads the data from the workbook each time it starts.

How to edit a word safely

- 6 Close the trainer first.
- 7 Open the vocabulary database workbook in Excel.
- 8 Go to the correct sheet/resource.
- 9 Find the word and edit the incorrect field, such as meaning, synonym, example, root, tone, or frequency.
- 10 Do not change the column headers.
- 11 Save the workbook and close Excel completely.
- 12 Open the trainer again and search the word with Word Finder to confirm the update.

Column	How to use it
word	The vocabulary word. Do not leave this blank.
meaning	Short GRE-standard meaning. This is the most important field for MCQ and typing.
part_of_speech	Noun, verb, adjective, adverb, etc.
group	Numeric group number. Keep groups simple: 1, 2, 3, and so on.
example / example2	Natural example sentences. Avoid repetitive template-style sentences.
synonym / antonym	Optional reference fields. The trainer may not use them in MCQ, but they can help review.
root	Word root or origin hint, if useful.
mnemonic	Default mnemonic shown in the mnemonic panel when selected.
tone	Positive, negative, neutral, mixed, or context-dependent.
frequency	GRE usefulness level such as Very High, High, Medium, or Low.
source_note	Reference/source note. It can be generic, such as User-imported vocabulary item.

3. Recommended Dataset Priority

For GRE preparation, the recommended first priority is **Grouped_Core_GRE_Words**. It is grouped, practical, and easier to follow as a structured learning path. Other datasets should be used after the core grouped list for reinforcement and expansion.

Priority	Dataset	How to use it
1	Grouped_Core_GRE_Words	Main first-pass study source. Study group by group. Use listwise order first, then shuffle for review.
2	High_Frequency_333 and Top_100_GRE_Words	Use as high-yield reinforcement after the core groups. Mark repeated weak words as Difficult.
3	Vocabulary_Builder_1400	Use for expansion after the core lists. Study in 30-word groups.
4	Classic_GRE_Word_List	Use for broad vocabulary exposure and final revision. Do not try to memorize the entire list before mastering core groups.
5	Ultimate/combined list	Use for mixed review after building a foundation.

Best starting plan

Start with Grouped_Core_GRE_Words, Group 1. Study about 30 new words per day and review due words daily. Do not jump into all datasets at once.

4. Software Layout

The trainer has three practical areas: the control area, the study card area, and the right information panel.

Area	What it does
Left control panel	Choose dataset/source, group, filter, mode, number of cards, order, and plans. It also contains Word Finder and quick actions.
Main study card	Shows the current word or meaning, answer box/options, reveal button, and rating buttons.
Right information panel	Shows selected status, Favorite/Difficult state, dataset count, group information, notes, progress summary, and mnemonic panel.

5. Manual Study Workflow

Manual Study is the best mode when you want full control. Choose the source, group, filter, study mode, count, and order manually, then start practice.

Control	Meaning	Recommendation
Source / Dataset	The vocabulary resource or sheet to study.	Use Grouped_Core_GRE_Words first.
Group	Specific group number or All.	Use one group at a time for new learning.
Filter	All, Unseen, Reviewing, Mastered, Favorite, Difficult.	Use Unseen for new words and Difficult for weak words.
Mode	Flashcard, Reverse, Typing, MCQ, Mixed.	Use Flashcard first, then Typing/Mixed for review.
Number of cards	How many cards in the session.	Use 20-40 for new learning; 50-100 for review.
Order	Listwise or Shuffle.	Listwise for first pass; Shuffle for review.

Recommended manual session

- 13 Select Grouped_Core_GRE_Words.
- 14 Select the next unfinished group.
- 15 Choose Filter: Unseen or All.
- 16 Choose Mode: Flashcard.
- 17 Choose Order: Listwise.
- 18 Study the group once, marking difficult words with Difficult.
- 19 Then review the same group using Mixed Mode or Typing.

6. Study Modes Explained

Mode	How it works	When to use it
Flashcard	Shows the word first. You try to recall the meaning, then reveal.	Best for first learning.
Reverse Flashcard	Shows the meaning first. You try to recall the word.	Good after the first pass.
Typing	Requires typed answer using word-to-meaning or meaning-to-word logic.	Best for active recall.
Multiple Choice	Shows a question and 7 answer options. Uses word and meaning only.	Good for fast review, but do not rely on it alone.
Mixed Mode	Randomly rotates different types of practice.	Best for revision after learning a group.

MCQ and typing rule

MCQ and fill/typing practice should use word and meaning only. Do not use synonym, antonym, or examples as the main MCQ prompt unless you intentionally add that later.

7. Mnemonic Section

Mnemonics are memory aids. The software separates default mnemonics from personal mnemonics so the learner can use either one.

Mnemonic type	Where it comes from	How it should behave
Default mnemonic	The mnemonic column in the main vocabulary database.	Shown only when the user selects Default or Both.
My mnemonic	The personal mnemonic field in the user data workbook.	Shown only when the user selects Mine or Both.

Mnemonic display choices

Choice	Result
Default	Shows only the database mnemonic.
Mine	Shows only the user-created mnemonic.
Both	Shows default and personal mnemonic together.
Hide	Hides all mnemonics.

Important privacy/design rule User mnemonic should not be visible in the normal Notes panel. It should appear only in the mnemonic panel when Mine or Both is selected.

How to write a good mnemonic

- Make it short and memorable.
- Connect the sound of the word with its meaning.
- Use your own language or personal memory if that helps you remember faster.
- Do not write long definitions as mnemonics.
- Use personal mnemonics especially for words repeatedly marked Difficult.

8. Notes Section

Notes are for personal study information, not for default vocabulary content. They should help the learner remember or understand the word in their own way.

Note field	Recommended use
Personal meaning	Write the meaning in your own words.
General note	Add a short explanation, warning, or confusion note.
Translation	Add a translation if helpful.
Tags	Add labels such as confusing, essay-word, verbal-common, similar-to-abate.

Difference between mnemonic and note Mnemonic is a memory trick. Note is an explanation or personal comment. Keep them separate for a cleaner study experience.

9. Favorite and Difficult

The simplified trainer uses only the two most useful flags: Favorite and Difficult. This keeps the system easy to understand.

Flag	When to use it
Favorite	Use for words you want to revisit often, important GRE words, or words you like.
Difficult	Use for words you forget, confuse, spell incorrectly, or answer wrong repeatedly.
Not selected	If neither Favorite nor Difficult is selected, the word is treated normally.

10. Word Finder

Word Finder lets you quickly search for any word in the database. Use it to check a word, edit notes, revise a specific word, or confirm whether a dataset correction is visible in the trainer.

- 20 Type the word or part of the word in the search box.
- 21 Click Find or press Enter if supported.
- 22 If one result is found, it opens directly as a flashcard.
- 23 If multiple results are found, choose the correct word from the result window.
- 24 After opening the word, reveal it, add notes, mark Favorite/Difficult, or study it normally.

11. Study Plans: Daily, Weekly, and Monthly

The plan system is a guided way to choose what to study. Manual Study gives full control each time. Study Plans help the learner follow a structured target.

Plan type	Meaning	Best use
Daily Plan	What to study today.	Use most of the time. Best for daily GRE routine.
Weekly Plan	A target for the current week.	Use to finish several groups across 7 days.
Monthly Plan	A larger target for the month.	Use for finishing a major source or many groups.

Plan options explained simply

Option	Meaning
Enabled feature	Turns the plan system on. If this option is not enabled, the plan can be ignored or will not actively build the study deck.
Dataset	The resource/dataset you want to study, such as Grouped_Core_GRE_Words or another imported sheet.
Group range	The group or groups included in the plan. Example: 1-5.
New words target	How many unseen words you want to learn.
Review target	How many old/due words you want to revise.
Mode	Flashcard, Typing, MCQ, or Mixed Mode.
Order	Listwise for original order, Shuffle for random review.
Group lock	Keeps study inside the selected group or group range before moving forward.

How to start a study plan

- 25 Open the Study Plan or Plan Study section from the software.
- 26 Turn on or check the Enabled Feature option. This tells the trainer to use the plan settings.
- 27 Choose the plan type: Daily, Weekly, or Monthly.
- 28 Choose the dataset/source you want to study.
- 29 Enter the group range. For a beginner, use one group or a small range such as 1-3.
- 30 Set the new-word target and review target. For example: 30 new words and 50 reviews for a daily plan.
- 31 Choose the study mode. Flashcard is best for first learning; Mixed Mode is best for revision.
- 32 Choose Listwise for first-pass learning or Shuffle for review.
- 33 Turn Group Lock on if you want to finish the selected group before moving forward.
- 34 Click Start Plan, Start Study, or the plan start button in your version of the software.
- 35 Study the generated deck and rate cards honestly with Again, Hard, Good, or Easy.
- 36 Return to the plan section later to check progress or continue the same target.

Example plan	Recommended settings
Daily beginner plan	Grouped_Core_GRE_Words, Group 1, 30 new words, 50 reviews, Flashcard then Mixed Mode, Group Lock On.
Weekly plan	Grouped_Core_GRE_Words, Groups 1-7, about 210 new words total, daily reviews, Group Lock On.
Monthly plan	Vocabulary_Builder_1400 or core-list continuation, 25-30 groups, calculated daily target, reviews every day.
Recommendation	Use Daily Plan for actual daily study. Use Weekly and Monthly Plan mainly to set bigger targets and understand progress. The Enabled Feature option should be turned on when you want the software to actively follow the plan.

12. Progress, Statistics, and Logs

The trainer records your learning history so you can see progress over time. Logs should be used for review and analysis, not edited casually.

Area	What it shows
Progress summary	Status, reviews, correct/wrong counts, last review, next review, and streak.
Session log	Each study session with source, mode, deck size, and accuracy.
Review log	Each answered word with result, rating, and timing.
Daily stats	Daily totals such as studied words, correct, wrong, accuracy, and time.

A full GRE trainer should show simple summaries such as: studied today, due reviews, weekly accuracy, monthly progress, difficult words, and plan completion percentage. The learner should not need to read raw spreadsheet logs every day.

13. Reset, Saving, and Backup

Reset rule Reset All Progress should not delete default mnemonics, user mnemonics, notes, translations, tags, or logs. It should reset study progress and flags only.		
Action	What it should reset	What it should keep
Reset current word	Progress and flags for the current word.	Notes, personal mnemonic, translation, tags, default mnemonic.
Reset all progress	All statuses, counts, intervals, next review dates, streaks, Favorite/Difficult flags if designed that way.	Notes, personal mnemonics, translations, tags, default mnemonics, database content.
Factory reset, if added later	Everything in user data.	Only use after backup.

Backup recommendation

- Make a backup of the user data workbook every few days during serious study.
- Before major software updates, copy the whole folder as a backup.
- Never keep the user data workbook open in Excel while studying, because the app may not be able to save progress.

14. Recommended GRE Vocabulary Study Strategy

The software is most useful when used with a clear routine. Do not try to study every dataset at the same time. Start with the highest-priority structured list and build outward.

Stage	Dataset focus	Method	
Stage 1	Grouped_Core_GRE_Words	Study one group at a time. Flashcard first, then Typing or Mixed Mode.	
Stage 2	High_Frequency_333 and Top_100_GRE_Words	Use as high-frequency reinforcement. Mark repeated weak words as Difficult.	
Stage 3	Vocabulary_Builder_1400	Expand vocabulary after the core list. Use 30-word groups.	
Stage 4	Classic_GRE_Word_List and Ultimate List	Use for broad revision and final exposure.	
Learner level	Daily new words	Daily reviews	Best mode
Beginner	20-25	40-60	Flashcard + Mixed Mode
Intermediate	30-40	60-100	Typing + Mixed Mode
Final revision	10-20	100+	Difficult + Mixed Mode
Best GRE habit Do due reviews first, then learn new words, then finish with Difficult words. This prevents forgetting old words while adding new ones.			

15. Troubleshooting

Issue	Likely reason	Fix
A source shows no words	Wrong filter, empty group, or group mismatch.	Choose All filter and All group. If it works, narrow the selection again.
Word Finder finds a word but nothing happens	Old code version or search result not connected to active session.	Use the updated trainer code where Word Finder opens a flashcard session.
MCQ says please type the answer	Submit button connected to typing function in old version.	Use the fixed code where MCQ Submit calls the MCQ answer function.
Meaning looks wrong	Dataset error.	Edit the database workbook, save, close Excel, and reopen the trainer.
Progress not saving	User data workbook open or locked.	Close Excel and try again.
Reset mentions mnemonic	Wrong wording in older version.	Use updated version. Reset should not delete mnemonics or notes.
Plan does not start	Enabled Feature is off, no dataset selected, or group range has no words.	Enable the feature, choose a dataset, set valid group range, and start the plan again.

16. Quick Start Checklist

- 35 Run first-time setup once on a new computer.
- 36 Open the trainer with the launcher.
- 37 Start with Grouped_Core_GRE_Words.
- 38 Choose Group 1 and Flashcard mode.
- 39 Study about 30 words.
- 40 Reveal each card and rate Again, Hard, Good, or Easy honestly.
- 41 Mark hard words as Difficult.
- 42 Add personal mnemonic for very hard words.
- 43 Use Mixed Mode or Typing for the second pass.
- 44 Do due reviews every day before adding new groups.

17. Final Recommendation

Use the trainer as a daily memory system, not just a quiz app. The best path is structured learning from Grouped_Core_GRE_Words first, daily spaced repetition, honest difficulty marking, personal mnemonics for stubborn words, and regular review through Typing and Mixed Mode. Keep the database clean by correcting any meaning or synonym errors when you notice them, and keep the user data backed up so your progress is safe.
